

# Ion Exchange Chromatography (IX) vs. Extraction Chromatography (EXC)

Eichrom User's Group Workshop  
RRMC 2014  
Schultz Group – University of Iowa

Eric Eitrheim

# Eichrom's definition

Extraction chromatography (EXC) is a technique that is ideally suited to the separation of radionuclides from a wide range of sample types. **This technique combines the selectivity of liquid-liquid extraction with the ease of operation of column chromatography.** Table 1 lists a number of EXC resins that are manufactured by Eichrom.

**Table 1.** Chromatographic Resins from Eichrom Technologies

<b>Material</b>	<b>Selectivity</b>
TRU Resin	Actinides(III, IV, VI), Ln(III)
UTEVA Resin	U(VI)
TEVA Resin	Th(IV), Np(IV), Pu(IV), Tc(VII))
Sr Resin/Pb Resin	Sr, Pb
Ln Resin	Ln(III)
Actinide Resin	Actinides

# Eichrom's definition

Extraction chromatography (EXC) is a technique that is ideally suited to the separation of radionuclides from a wide range of sample types. **This technique combines the selectivity of liquid-liquid extraction with the ease of operation of column chromatography.** Table 1 lists a number of EXC resins that are manufactured by Eichrom.

**Table 1.** Chromatographic Resins from Eichrom Technologies

<b>Material</b>	<b>Selectivity</b>
TRU Resin	Actinides(III, IV, VI), Ln(III), <b>Po</b>
UTEVA Resin	U(VI)
TEVA Resin	Th(IV), Np(IV), Pu(IV), Tc(VII))
Sr Resin/Pb Resin	Sr, Pb, <b>Po, Ga, Pa</b>
Ln Resin	Ln(III)
Actinide Resin	Actinides
<b>1-octanol</b>	<b>Po, Ga, Pa</b>

# EXC system: Porous Beads

...three major components of an EXC system: the inert support, the stationary phase, and the mobile phase. ... Liquid extractants, either single compounds or mixtures, are used as the stationary phase.

# Gray area?

TEVA – aliquat 336™

LN resin - HDEHP

Anionic exchanger

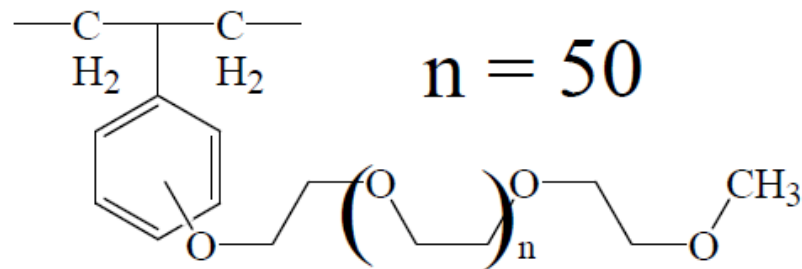

Both utilize an ion exchange mechanism

Cationic exchanger

TRU resin - CMPO

ABEC-like resin

“Chelating”/Complex formation extractant

Absorbent

# Discussion

- **What distinguishes EXC from IX?**  
Development method? Extraction method?
- Polymer - covalently bonded (IX) vs. physisorption on “porous bead” (EXC)?
- Is Ion-Exchange a type of Extraction Chromatography?
- Can Extraction Chromatography be Ion-Exchange?
- Is anyone else confused?

# Discussion

- What are the advantages/disadvantages or distinguishing factors of EXC vs. IX?
  - Loading capacity?
  - Separation factors?
  - Distribution coefficients?
  - Radiolysis?
  - Stripping of organics?
  - Kinetics?
