

*Workshop Sessions 1, 2 and 4*

**TRAINING AND OPPORTUNITIES FOR THE NEXT GENERATION  
OF HEALTH PHYSICISTS AND RADIOCHEMISTS**

**Donna Beals ([donnabeals@msn.com](mailto:donnabeals@msn.com))**

An 8-hour workshop (two half-days) will be held in conjunction with the 61<sup>st</sup> Annual Radiochemistry and Radiobioassay Measurements Conference. The workshop goal is to bring together potential employers with university professors and students. Employers will present an overview of positions which are filled by those with health physics or radiochemistry duties, and describe the education and background of those filling these positions. University professors will present an overview of the education and research opportunities they provide to students studying in these disciplines. Students will present their backgrounds, course of studies and research. The goal is to foster discussion between those that might be hiring and those that are training/being trained to fill these positions.

Confirmed participants include representatives of the federal government (DOE, DOD, FDA and CDC labs), state and private industry, and the Universities of Iowa, Missouri, Clemson, California-Irvine, and Laval (Canada).
